

## Imaging & Presentation

MZA's extensive in-house capabilities in video and computer animation, computer-aided drafting, and photography, along with our large-scale display graphics capabilities, provide the client with a broad range of powerful imaging and presentation possibilities.

## Video & Computer Animation

MZA maintains its own video and animation studio for pre-production planning, production, and post-production, including dubbing and non-linear editing of videos and interactive DVDs.

MZA creates videos for educational, research, entertainment and other general interest purposes. MZA produces brochures, videos, and interactive DVDs for a wide variety of training programs.

## Large-Scale Display Graphics

MZA produces large-scale display graphics for a wide variety of purposes, such as tradeshow displays, promotional events, educational presentations, and historical recreations. Other applications include displays for site development or redevelopment projects, which often incorporate aerial photogrammetry and digital imaging.

## Computer-Aided Drafting & Graphics

MZA has extensive in-house CAD and graphics capabilities to generate architectural and engineering drawings and illustrations. Our studios include state of the art plotting capabilities to generate standard as well as large-scale drawings.

## Photography

MZA provides digital and film photographic services on many projects. Our imaging and presentation capabilities include both microphotography and macrophotography.

## Demonstrative Models

In our production shop, MZA often designs and fabricates scale models to support our presentations.

MZA may use the model to conduct a simulation in its lab, then create a video and/or computer animation to provide visual representation explaining the issue. By combining these capabilities, MZA provides a compelling "seeing is believing" presentation.
